// This CV is written in the form of a wiki. If you want you can click on the links in green and blue. Good navigation ! This CV is also available under the classic form of CV pdf .//

Summary

Today I am looking to work in a ** position of responsibility ** for example executive, supervisor etc, This in a small company that is interested in the knowledge of its employees. Secondary sector: technical, industry, maritime, crafts, ..

My training is that of a ** merchant navy officer **, I sailed for 6 years as a watch manager then I took care of river boats as a manager. Finally my interest in ** the organization and transmission of information ** found its tool of choice in ** wikis **. .

Training: Merchant Navy (1999-2002 & 2004-2005)

Technical training at Master 2 level : navigation, mechanics, electricity, electronics, welding, electrotechnics, maritime law ...

Experience: navigation on merchant ships (2003-2010)

Sailing is extremely educational. You learn to take responsibility from the start. There is an important sense of hierarchy which does not take away an important autonomy in the tasks. At sea, no garage, no firefighter or doctor: a crew must make do with what there is on board! I would add also that you have to like teamwork and even community life .

I have sailed mainly on passenger boats as a deck or engine watchkeeping officer.

Manager's experience in river and maritime armaments 2010-2019

- Between 2010-2014 I am technical manager at Fluviofeeder Armemement. Responsibilities and a certain freedom in the decisions convince me to remain and take up the daily challenges.
- 2016 Kreiz mixed ferry certification manager destined for the Comoros. Seaworthiness diagnostic. Relationships between shipyard and certification class or how to balance Africa's limited financial resources with the requirements of the French administration.
- 2017–2019 CBL operations manager: Compagnie des Bacs de Loire Fleet of 3 ferries, 24 sailors. Management of the technical part and vessel certificate. Crew management. Here again, the management trust me a lot so I am fully involved in this adventure.

Interest in Wikis and Knowledge Management

My willingness and my ability to organize knowledge is without doubt the most important added value that I can bring to your company, for example:

- You believe that the storage of computer data and its availability can be improved.
- You believe that during new appointments information has been lost. etc

If you believe knowledge is one of the main assets of your business, then we are on the same page. See here my wiki project.

Subjective skills

Qualities developed: Good relationship with the various employees of the company, passengers, associations, inspectors etc ... I am a force of proposal in order to unite and bring together teams around innovative projects. Rigor, autonomy, listening, taste for teamwork, enterprising character. Good resistance to stress in order to deal with complex situations if necessary. Cross-functional projects dimension, versatility. Editorial skills and good command of IT tools. professional conscience

Faults to consider: Short-term memory is low, which is why I always take something with me on paper. I am sometimes absent minded

Miscellaneous

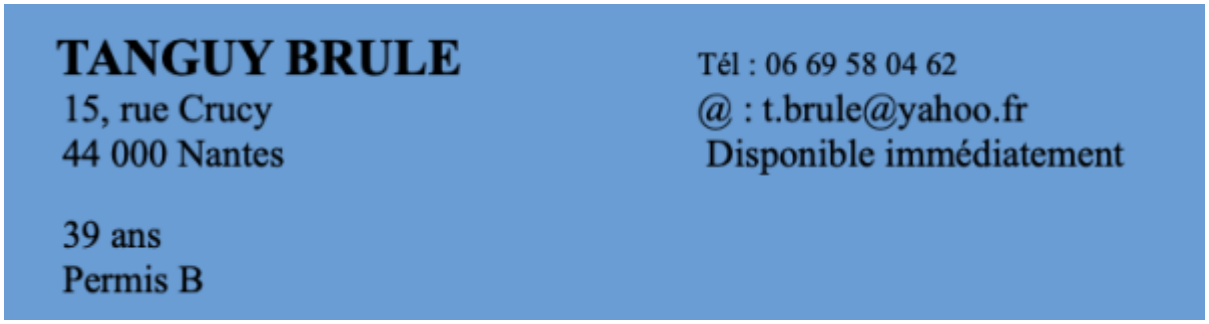

Languages

- Fluent oral English. Very good level in writing.
- Spanish intermediate level

other

First aid with the Red Cross level PSE2 (level 2 team care with material)
